DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-21, drawn to equipment detail for providing wireless link to fixed equipment, classified in class 455, subclass 554.2.
 - II. Claims 22-26, drawn to system selection, classified in class 455, subclass 435.2.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as *checking the status of a first network, and when the first network is available initiating, via the first network, a first network call request corresponding to the call request and sending a message via a second network indicating that the first network is no longer available, and when the first network is not available, initiating, via the second network, a second network call request corresponding to the call request*. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
